

ii)

$$\begin{cases} -c < x-at < 0 \\ -c < x+at < 0 \end{cases} \quad u = \frac{1}{2} \left( \frac{h}{c}(x+at) + h + \frac{h}{c}(x-at) + h \right) = \frac{h}{c}x + h$$

iii)

$$\begin{cases} 0 < x+at < c \\ 0 < x-at < c \end{cases} \quad u = -\frac{h}{c} + h$$

iv)  $u \equiv 0$

v)

$$\begin{cases} x-at < -c \\ -c < x-at < 0 \end{cases} \quad u = \frac{1}{2} \left( \frac{h}{c}(x+at) + h \right)$$

vi)

$$\begin{cases} -c < x-at < 0 \\ 0 < x+at < c \end{cases} \quad u = \frac{1}{2} \left( \frac{h}{c}(x-at) + h - \frac{h}{c}(x+at) + h \right) = -\frac{ah}{c}t + h$$

vii)

$$\begin{cases} 0 < x-at < c \\ c < x+at \end{cases} \quad u = \frac{1}{2} \left( -\frac{h}{c}(x-at) + h \right)$$

viii)

$$\begin{cases} 0 < x+at < c \\ x-at < -c \end{cases} \quad u = -\frac{1}{2} \left( -\frac{h}{c}(x+at) + h \right)$$

ix)

$$\begin{cases} x + at > c \\ -c < x - at < 0 \end{cases} \quad u = \frac{1}{2} \left( \frac{h}{c} (x - at) + h \right)$$

x)

$$\begin{cases} x + at > c \\ x - at < -c \end{cases} \quad u \equiv 0$$

Пример 2

$$\phi = \begin{cases} h \left( 1 - \frac{x^2}{c^2} \right) & x \in [-c; c] \\ 0 & x \notin [-c; c] \end{cases}$$

$$\psi = 0$$

i)

$$\begin{cases} x + at < -c \\ x - at < -c \end{cases} \quad u = 0$$

ii)

$$\begin{cases} -c < x + at < c \\ -c < x - at < c \end{cases} \quad u = \frac{1}{2} \left( h \left( 1 - \frac{(x + at)^2}{c^2} \right) + h \left( 1 - \frac{(x - at)^2}{c^2} \right) \right)$$

iii)

$$\begin{cases} x - at > c \\ x + at > c \end{cases} \quad u = 0$$

iv)

$$\begin{cases} -c < x + at < c \\ x - at < -c \end{cases} \quad u = \frac{1}{2} \left( h \left( 1 - \frac{(x + at)^2}{c^2} \right) \right)$$

v)

$$\begin{cases} -c < x - at < c \\ x + at > c \end{cases} \quad u = \frac{1}{2} \left( h \left( 1 - \frac{(x - at)^2}{c^2} \right) \right)$$

vi)

$$\begin{cases} x + at > c \\ x - at < -c \end{cases} \quad u = 0$$
